SUMMARY

Highly proficient Software Developer with expertise in Python and Generative AI, with a proven track record in AI application development. Adept at building production-ready AI systems using LangChain, LangGraph, MCP (Model Context Protocol), and Azure AI Foundry. Skilled in Prompt Engineering, Computer Vision, Document Intelligence, and Agentic AI workflows, delivering scalable enterprise solutions.

SKILLS

AI/ML Frameworks: Python, TensorFlow, OpenCV, LangChain, LangGraph, Langfuse (Observability), MLflow, Knowledge Graph

Generative AI: GenAI, Prompt Engineering, Retrieval-Augmented Generation (RAG), AI Agents

Cloud & DevOps: Azure AI Foundry, Azure APIM, Azure Deployment Services, Application Insights, GIT

Protocols & Architecture: MCP (Model Context Protocol), REST APIs, Document Intelligence, OCR

Databases & Languages: MySQL, Java, Python

WORK EXPERIENCE

Trainee Software Engineer | InfoBeans Technologies, Indore

Jan 2025 – Present

- Developed and deployed AI-powered applications using Python, LangChain, LangGraph, and Azure AI Foundry in production environments.
- Implemented a client-facing RFQ system using Model Context Protocol (MCP) architecture, integrating Azure AI Foundry and Azure APIM for enterprise-grade API management.
- Led Prompt Engineering efforts to optimize LLM response quality across internal and client-facing AI applications.
- Integrated Langfuse observability into internal AI systems, enabling comprehensive monitoring, tracing, and debugging of LLM pipelines.
- Built Agentic AI workflows using LangGraph, including multi-step reasoning and tool-calling agents.
- Developed computer vision solutions using OpenCV and TensorFlow for real-time object detection use cases.
- Contributed to a RAG project (ASHRAE) involving OCR-based extraction of structured text and complex mathematical formulas from PDFs using RAG.
- Managed end-to-end Azure deployment pipelines, ensuring smooth production releases and system reliability.

PROJECTS

CSA RFQ System | Role: Trainee Software Engineer (Team of 5)

Technologies: MCP, Azure AI Foundry, Azure APIM, Application Insights, Azure Deployment Services

- Refactored and implemented complete functionality using Model Context Protocol (MCP) architecture, cleanly separating MCP Client and MCP Server concerns.
- Led MCP Client development and Azure AI Foundry integration with full APIM configuration for secure, scalable API management.
- Implemented comprehensive distributed tracing using Application Insights for end-to-end monitoring and debugging.
- Managed production deployment pipelines ensuring zero-downtime releases in an enterprise Azure environment.

InfoBeans AI HomePage | Role: Trainee Software Engineer (Team of 3)

Technologies: LangChain, Python, Prompt Engineering, MLflow

- Contributed to end-to-end development and deployment of an internal AI-powered homepage application.
- Led prompt engineering experiments tracked using MLflow to optimize model response quality and consistency.

ASHRAE Document Processing System | Role: Intern (Team of 2)

Technologies: Python, RAG, OCR, Azure Document Intelligence, PDF Processing

- Developed a proof-of-concept for extracting structured text and complex mathematical formulas from PDF documents using RAG-based Document Intelligence.
- Performed functional testing, validated extracted outputs, reported defects, and assisted in bug resolution under senior developer guidance.
- Gained experience in enterprise-level QA workflows and document intelligence pipelines.

EDUCATION

- DAVV (Devi Ahilya Vishwavidyalaya), Indore, India | Bachelor of Science, Computer Science 2023
